## AGENDA ITEM 6C

### THOMASVILLE ROAD MULTI-USE TRAIL

TYPE OF ITEM: TYPE OF ITEM: Action

#### **STATEMENT OF ISSUE**

The Thomasville Road Multi-Use Trail (TR Trail) was identified in the 2019 Tallahassee Leon County Bike and Pedestrian Master Plan (BPMP) as an initial project for a Feasibility Study. As the BPMP concluded in early 2020, the Feasibility Study was initiated with the limits from Betton Road to Metropolitan Boulevard. While the project limits in the BPMP begin at Monroe Street and terminate at Interstate 10, the on-going Midtown Area Transportation Plan (MATP) limits cover the Monroe Street to Betton Road portion of the corridor.

Like the MATP, the initial component of the TR Trail is to identify existing conditions including sidewalks, utilities, trees, parks, businesses, and residential areas along both sides of the corridor. This process began in January of 2020 and continued through the end of August with slowdowns related to the pandemic.

In addition to collecting the existing data, this initial process also included the several internal meetings of bike and pedestrian related city and county departments, as recommended by the BPMP. These meetings were conducted to gather information regarding existing and future projects, knowledge of the corridor, such as tree conditions, and for input on the existing conditions in general.

What will be presented at this meeting is the information that has been gathered to this point. After this meeting the second phase of the project, Public Engagement, will begin. This includes stakeholder and public meetings and plenty of opportunities for input. More information on the Public Engagement will be provided via the CRTPA website and through email distribution in coordination with City of Tallahassee Neighborhood Services.
